

Natural Cleaner for Grease Stains

Here is another non-chemical cleaner you can make yourself. This one is for grease stains. It can be used on rugs as well as fabrics. But be sure to do a small tester area first.

Ingredients

Rubbing alcohol

Salt

Instructions

Measure 4 parts alcohol to 1 part salt. For example, 4 teaspoons alcohol to 1 teaspoon salt.

Rub mixture hard over the grease stain. You will want to rub in the natural direction of the nap to avoid damaging it. The nap is the raised or fuzzy surface of rugs and fabrics.

Keep in mind that alcohol may damage some fabrics. It's a good idea to research your fabric before putting alcohol on it.

Recipe from the book "Solve it with Salt".
